Pump Station 15 Location
Sustainable Features

The Madison Metropolitan Sewerage District cleans over 40 million gallons of wastewater every day as part of our mission to protect public health and the environment. We recently completed rehabilitation to one of our eight pumping stations, the $4.4 million Pumping Station 15 Rehabilitation project reflects the District's ongoing efforts to meet the infrastructure needs of the region while putting sustainable practices in action, improving quality of life, preventing the spread of aquatic invasive species and encouraging clean modes of transportation. The project was the first in the state of Wisconsin to receive an O2 (2) Environmental Award (gold).
