SUBJECT: Approved sewerage district budget preserves affordability, sets course for resiliency

MADISON, WIS. – The Madison Metropolitan Sewerage District Commission has approved a $40.7 million budget for 2019 that invests in infrastructure, information technology and strategic initiatives as part of the district’s long-term vision for enriching life through clean water and resource recovery.

A copy of the 2019 Budget and Capital Improvements Plan is available online and can be viewed at: http://www.madsewer.org/Planning/Budget-Finance.

“The 2019 budget directs resources for infrastructure upgrades, energy management and an assessment of new information technology needed to manage our plant and collection system,” said Michael Mucha, the district’s chief engineer and director. “The budget also continues our commitment to innovative programs that reduce pollution at the source.”

The district manages three major categories of revenues and expenditures through an operating budget; a capital projects budget; and a debt service budget. For 2019, total operating revenue is projected at $40.7 million, up from a budgeted $37 million in 2018. Total operating expenditures are also budgeted at $40.7 million, up from a budgeted $37 million in 2018.

The 2019 operating budget revenues and expenditures include a $1.2 million transfer of money from a general reserve fund to increase fund balances in the equipment replacement fund and capital projects fund for future needs beyond 2019. The adopted budget includes a service charge increase of 6.3 percent.

The district does not charge or receive revenue directly from end users; instead its costs are passed through 26 customer communities that bill households directly using local cost recovery methods. The district works closely with customer communities to fairly allocate costs while maintaining affordability.

For 2019, the district’s planned revenues and expenditures are projected to result in average annual household service charges of $195, up 6 percent from $184 in 2018 for district provided services. The increase amounts to 92 cents per month for an average residential customer. Local utility costs also appear on end user’s bills.
ABOUT THE DISTRICT
Established in 1930 to protect the lakes and streams of the upper Yahara watershed, Madison Metropolitan Sewerage District today serves 26 Madison area customer communities covering some 184 square miles and 380,000 people. The district owns and operates 141 miles of pipe and 18 regional pumping stations that convey approximately 41 million gallons of wastewater to the Nine Springs Wastewater Treatment Plant each day. Organized as a municipal corporation, the district is a leader in sustainability and resource reclamation; its rates are established by the Madison Metropolitan Sewerage District Commission.
