The Mission of the Madison Metropolitan Sewerage District

To protect public health and the environment, the Madison Metropolitan Sewerage District provides exceptional wastewater collection, treatment, and related services to the metropolitan Madison area and surrounding areas in a wise and cost-effective manner.

PREFACE

Clean water is a precious resource, and the collection and treatment of wastewater hold prominent roles in preserving that resource.

Wastewater collection systems represent a crucial segment of public infrastructure. Collection systems are responsible for continuously conveying huge volumes of household, commercial, and industrial wastewater to treatment facilities where the water can be cleaned and safely returned to the environment. Extensive networks of gravity interceptors, pumping stations, and pressure sewers must operate 24 hours per day and 365 days per year to accomplish this important function.

A robust and reliable collection system is at the heart of the Madison Metropolitan Sewerage District’s core services. The essence of the District’s Collection System Facilities Plan is to ensure that a high level of reliability continues into the future, supporting MMSD’s mission to protect public health and the environment.

This Facility Plan Amendment builds upon the original Collection System Facilities Plan (2002) and ensures that the District’s collection system, a huge and dynamic asset of the Madison region, provides sustainable wastewater conveyance by managing, improving, and expanding the system in a wise and cost-effective manner.
Table of Contents

Preface

Chapter 1.   Introduction and Summary
   Purpose 1-1
   Recognition and Dedication 1-2
   Background Information 1-2
   A Valuable but Aging System 1-3
   Methodology and Results 1-4
   DNR Facility Planning 1-4
   Public Participation 1-5

Chapter 2.   Asset Management & CMOM
   Introduction 2-1
   Asset Management 2-1
   Capacity, Management, Operation & Maintenance (CMOM) 2-13

Chapter 3.   Progress Since Original CSFP was Developed
   Status of Recommended Projects in 2002 Collection System Facilities Plan 3-1
   Screenings and Solids Handling Update 3-2
   Hydraulic Model 3-5

Chapter 4.   System Capacities and Projected Flows
   Introduction 4-1
   Projected Flowrates 4-2
   Benchmark Design Capacities 4-3
   Limitations of Flow Measurements 4-5
   Pumping Station Capacity Analysis 4-6
   Pumping Station No. 15 Flow Diversion 4-6
   Forcemain Capacity Analysis 4-8
   Gravity Interceptor Capacity Analysis 4-9
   Discussion 4-10

Chapter 5.   Condition and Needs Assessment
   Introduction 5-1
   Pumping Station Priority Rankings 5-1
   Pumping Station Rating Criteria 5-2
   Pumping Station Summary Observations 5-9
   Forcemains 5-12
   Gravity Interceptors 5-14

Chapter 6.   Special Projects and Diversions
   Introduction 6-1
   The Future of PS 7 and a New PS 18 6-1
Appendices

A1. MMSD Collection System Evaluation (January 2009)
A2. Condition Assessment for Sewage Pumps at MMSD Stations
A4. Interceptor Maintenance Guidelines
A5. Hydraulic Modeling Results
A6. Lower Badger Mill Creek Interceptor
   - MMSD Lower Badger Mill Creek Sewer Service Report (December 2004)
   - Memorandum of Understanding with City of Verona (March 2006)
   - Agreement with City of Madison (January 2008)
A7. EPA Request for Information, April 2010
A8. Analysis of West Interceptor System, July 2010
A9. Pumping Station 18 Feasibility Study, August 2010
A11. Public Participation
