

# SUMP PUMPS

Sump pumps remove water from basements to protect from water damage or flooding in areas with a high water table or groundwater seepage.

Sump pumps should discharge water outdoors and not into sanitary sewers. One incorrectly installed sump pump can add up to 7,200 gallons per day of clear water to the wastewater system unnecessarily!

# PROPER SUMP PUMP CONNECTIONS

If your sump pump is connected to the sewer system, or if you're not sure, contact a plumber to find out.

A plumber can help you make a plan to fix the situation so your sump pump discharges properly and keeps clear water out of the sanitary sewer.
